Electric, and Alternate Fuels
U.S. Department of Energy

Highlights

Production of bituminous coal and lignite in the week ended June 12, 1982, as estimated by the Energy Information Administration, was 17,481,000 short tons. This was an increase of 2,428,000 short tons, or 16.1 percent from production in the previous week which was below normal levels because of the Memorial Day holiday. Production in the corresponding week of 1981 was 13,123,000 short tons. Bituminous coal and lignite production from January 1 through June 12, 1982 totaled 392,673,000 short tons, up 26.9 percent from production in 1981.

Production of Pennsylvania anthracite in the week ended June 12, 1982, as estimated by the Energy Information Administration, was 130,000 short tons, an increase of 18,000 short tons or 16.1 percent from production in the previous week. Production in the corresponding week of 1981 was 115,000 short tons. Anthracite production from January 1 through June 12, 1982 totaled 2,918,000 short tons, up 24.2 percent from production in 1981.

Weekly Coal Production provides timely information on coal: current statistics on the production of anthracite, bituminous coal, and lignite are provided each week; monthly, quarterly, and annual statistics on coal consumption, production, stocks, imports and exports, and related supply and demand data are provided as they become available.

Weekly Coal Production is intended for use by the coal industry, the press, State and Federal Governments, policy makers, consumers, and analysts. Weekly coal production estimates are based on current trends in weekly rail carloadings of coal and current coal production trends as reported in *Coal Distribution* (Form EIA-6), monthly and quarterly coal production reports from State mine agencies, and *Coal Production Annual* (Form EIA-7a).

This publication is available on an annual subscription basis from the Superintendent of Documents, U.S. Government Printing Office.
